

WHERE STRENGTH MEETS **INNOVATION**

Hydraulic Front Loading Lowbed Trailer

This type of lowbed trailer due to their fully self-operating functions and unique body design, is the most advanced and reliable solution for loading and transporting oversized and super-heavy machinery. These lowbed trailers are available in a wide range of designs and capacities, ranging from 80 to 200 tons.

Rear Loading Lowbed Trailer

These lowbed trailers are the most common kind of trailers that are being used for the transportation of construction machinery and other heavy equipment's, they are available in a wide range of designs & capacities, typically from 40 to 150 tons.

Detachable Gooseneck Lowbed Trailer

These lowbed trailers, with their lower chassis, gooseneck design, and quick detachment from the trailer head, are highly efficient for transporting construction machinery and other heavy equipment. They are available in a wide range of designs and capacities, typically ranging from 40 to 200 tons.

Tipper Trailer

The tipper trailer is the most well-known type of trailer in the construction, contracting, and mining industries. Its primary purpose is the transportation and quick unloading of loaded materials. Tipper trailers are fabricated in various designs for different applications and capacities, typically ranging from 20 to 75 cubic meters (cbm).

Flatbed Trailer

Extendable Lowbed Trailer

Since 2006

Our specialty is designing and fabricating trailers capable of transporting objects of any size and weight.
