

Visualization and Visual Analytics

Exercise E : Geographic Data

Lows and Highs in the North East

Create pairs of maps for one of more of the other IMD sub-domains.
Create one page of visuals for each sub-domain.

On each page create two maps, one showing all LSOA in the lowest 3000 by rank and one showing all LSOA in the highest 3000 by rank.
Use one numerical slicer per map to select these ranges.

Use either all the Local Authority Districts or use a common page filter so that you have a consistent sub set in each chart and on every page.

Hints:

Copy and paste will be useful in completing this.

You can duplicate whole pages, just right click on the page tab.

You can slice the sub-domain rank using a numerical slicer.

You may need to edit the visual links between slicers and maps
